

Linux practice

How to use the commands

Requirement:

- Explain the meaning of the command (by Vietnamese)
- Run command with at least 3 options
- Take screenshot of the result

Example:

`ls` : liệt kê nội dung của folder hiện tại

Option:

- `a` : Liệt kê các tệp và hiển thị quyền, người dùng chủ sở hữu, nhóm chủ sở hữu, ngày sửa đổi / ngày tạo
- `t` : Sắp xếp theo thời gian được sửa đổi
- `S` : Sắp xếp theo kích thước

Tip: Can combine some options to get best result (ex: `ls -al -S`)

Run and take the screenshot :

`ls -a`

[Image screenshot here]

`ls -t`

[Image screenshot here]

`ls -S`

[Image screenshot here]

Command list:

- `ls`
- `man`
- `cd`
- `rm`
- `cp`
- `mv`
- `ln -s`
- `touch`
- `ps`
- `top`
- `tail`

- chmod
- ssh
- scp
- grep
- cat
- whoami
- whereis
- which
- tar
- gzip

User and group

1. Create user `linux_test`
2. Create group `linux_group`
3. Add user `linux_test` to the group `linux_group`.
4. Create a folder `linux_document` with the user owner is `linux_test`
5. Create a user `linux_user` and add to group `linux_group`
6. Add permissions for the folder `linux_document` with :

User: read + write + execute

Group: read + write

Other: - (No permissions)

Run `ll -al` to check permission again (take screenshot here also)

7. Login by `linux_user` user. Try to create a file `file.txt` inside folder `linux_document`
8. Create user `guest`. Login to user `guest` and try to create a file `guest.txt` inside folder `linux_document`
9. Delete user `linux_test`, `linux_test`, `guest`
10. Delete group `linux_group`

SSH/Download and Upload

Remote server info:

IP: `3.16.109.96`

User name: `ec2-user`

keypem : `linux_training.pem`

(Download key pem [here](#))

Requirement:

1. Create a file name with format `[Yourname_php].txt` . Example: `Trunghuan_php.txt`
2. Upload file `[Yourname_php]_php.txt` to folder `\home\ec2-user\linux_practice` of the remote server .
3. Access to the remote server with above info, check if the file already uploaded exists in the folder or not.
4. Download the file `server_file.txt` from folder `linux_practice` on the remote server .
